AvePoint® DocAve® Connector

File Share Integration with DocAve Connector

AvePoint®

Event

Your organization is migrating all enterprise content to SharePoint 2013. You currently have content stored in file shares and need to provide end-users with a single point of access to all digital assets.

Ernie, your IT administrator, suggests integrating the file share content instead of migrating to save time and to offset additional SQL storage costs.

Step 1

Ernie deploys DocAve Connector to cohesively integrate the file share content into SharePoint.

Step 2

Using Connector, Ernie creates a new Connector library.

Step 3

Ernie maps to the file system directories that all of his content resides in using the folder path.

Step 4

Ernie runs a sync, and the file share content becomes accessible in SharePoint.

Step 5

All of your organization's employees can now access and edit the files they need, taking advantage of full SharePoint functionality including full-text search, Office Web Apps and version tracking.

End Result

IT Administrators
Avoid headaches of migration project and burdens on SQL server storage.

Governance Board
Sees improvements in end user adoption.

End Users
Have a single point of access to the files they need with full SharePoint functionality.
